

HOW FAR DID THEY TRAVEL?

Materials needed: paper, pens, calculator and internet

William and his grandpa travelled to many destinations around the world and now need to claim their travel points (1 for each kilometre/mile travelled)

Can you add up the kilometres or miles from one place to the next to see how far they travelled?

For example:

Start in Sydney and travelled to Beijing in China =

Beijing in China and travelled to Taj Mahal in India =

How many travel points can they claim?
